

# Here's how YOU count!

Scan to learn about the **Community Counts Registry**

We've **learned so much** about bleeding disorders in **women and girls\*** from the patients included in the Community Counts Registry!

\*Community Counts data are recorded by sex assigned at birth and information presented here includes all people who have shared biological risk factors for bleeding disorders due to birth sex

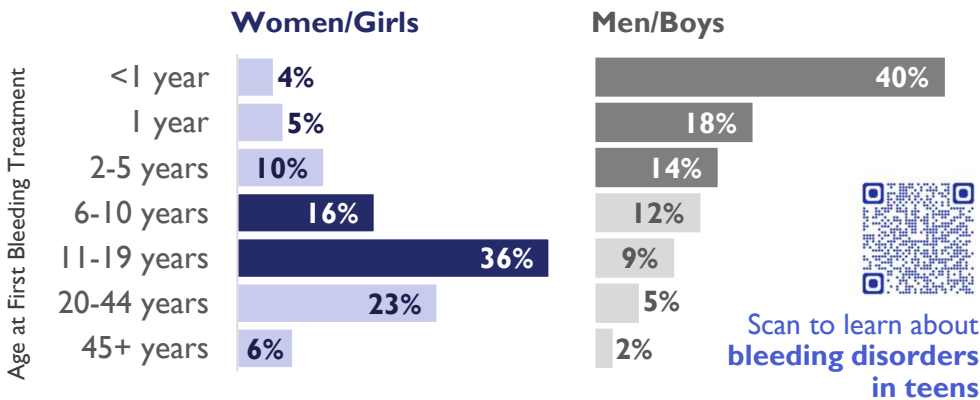

## 7,072 Registry participants are **women and girls**

Data as of 5/11/2024

**3 in 4** women and girls who have been diagnosed with a bleeding disorder have **received treatment for a bleed.**

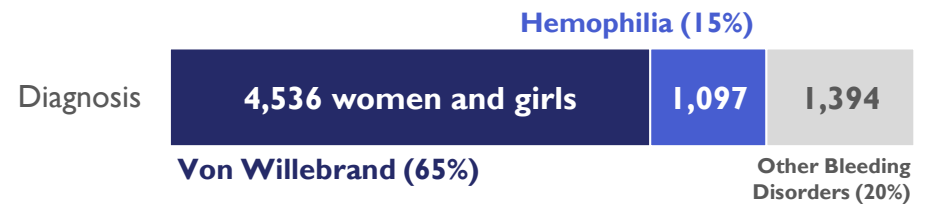

**1 in 2** women and girls were **pre-teens or teenagers** when they experienced their first bleed that required treatment. **Men and boys** more commonly **receive their first treatments as children\*\*.**

Scan to learn about **bleeding disorders in teens**

\*\*among patients with a documented age at first bleeding treatment

**2 in 3** women and girls who have a bleeding disorders have **Von Willebrand Disease.**

Nearly **1 in 10** women and girls diagnosed with a bleeding disorder receive treatment to prevent heavy menstrual bleeding.

**Heavy periods can be a symptom of an undiagnosed bleeding disorder.**

The National Bleeding Disorder Foundation's **"Better You Know"** program raises awareness of bleeding disorders among women and girls who may experience bleeding symptoms but **haven't been diagnosed yet.**
